

# Example Usage of `apalike-ejor` BibTeX Style

Adam Rumpf\*

June 18, 2021

## 1 Introduction

This example document demonstrates the usage of the `apalike-ejor` style, which was developed for formatting bibliographies in accordance with the *European Journal of Operational Research* style guide (as of June 18, 2021).

The BibTeX style file `apalike-ejor.bst` is a fork of `apalike`, originally by Oren Patashnik, and mostly follows the standard APA style. Among other edits hyperlinked URL and DOI fields have been added, which requires the usage of the `hyperref` package.

In order to use `apalike-ejor`, make sure that the `apalike.ejor.bst` file is located somewhere where your compiler can find it, then compile your document with BibTeX a couple of times followed by L<sup>A</sup>T<sub>E</sub>X a couple of times. At minimum the following should be included in your main `.tex` document:

```
\documentclass{article}
\usepackage{natbib} % required for inline citations
\usepackage{hyperref} % required if utilizing url or doi fields

\begin{document}
%%
%% include the main body of the document here
%%

\bibliographystyle{apalike-ejor}
\bibliography{example-references} % replace with your .bib file

%%
%% include any text following the bibliography here
%%
\end{document}
```
